**Troy, Ohio,**

## **STATE FIRE MARSHAL REMINDS OHIOANS TO HEAT HOMES SAFELY**

The Division of State Fire Marshal is reminding Ohioans to focus on fire safety when heating their homes this winter and to use extra care if utilizing secondary heating sources like space heaters.

"Proper installation, use and maintenance of winter heating devices are essential for reducing the risks of fire and carbon-monoxide poisoning," says Interim State Fire Marshal Donald C. Cooper. "Home heating fires in Ohio are often caused by human error, particularly through the misuse of portable heaters, wood stoves and fireplaces."

In 2008, eight people died and 34 people were injured in 557 heating-related fires in homes throughout Ohio.

Marshal Cooper stresses the importance of having your home's heating system checked annually by a qualified professional. Furnaces, fireplaces, wood stoves and their chimneys should be inspected and cleaned prior to the start of every heating season.

Be certain that alternate sources of heating, such as portable electric and kerosene heaters and wood burning stoves, are used according to their instructions and with extreme caution. For any space heater remember: Space Heaters Need Space - at least three feet from anything that can burn.

To avoid falling victim to carbon monoxide - a colorless, odorless, potentially deadly gas produced by fuel-burning equipment, such as furnaces, wood stoves, fireplaces, and kerosene heaters - install at least one carbon monoxide alarm near sleeping areas. Call the fire department if the alarm sounds.

Marshal Cooper offers the following additional safety tips to help you have a fire safe winter.

### **Fireplaces and Wood Burning Stoves**

- Allow enough clearance between a wood burning stove and combustible materials such as walls, floors and ceilings.
- A wood stove should be placed on an approved stove board to protect your floor from heat

and hot coals.

- Make sure the flue is open before lighting a fire, and never close the flue while a fire is still smoldering.
- Use a fireplace screen to prevent any sparks from reaching out and igniting nearby objects.
- Never use gasoline or lighter fluid to start a fire.
- The immediate area in front of a fireplace (approximately 3 feet) should not have a rug, carpet or exposed wood flooring.
- When lighting a gas fireplace, strike your match first, then turn on the gas.
- Burn only dry, seasoned wood, and dispose of the cooled ashes in a closed metal container outside and away from your home.
- Never leave a fire burning unattended in the fireplace.

#### **Portable Space Heaters**

- When buying a space heater, look for a control feature that automatically shuts off the power if the heater falls over.
- Never leave a heater on when you are not in the room or when you go to sleep, and do not leave children or pets unattended around any heating source. Unplug the heater when you are not using it.
- Don't use an extension cord with an electric portable heater. The current to the heater could melt the cord and cause a fire.
- Don't plug more than one heating device into an outlet.
- Never use electric heaters near water - as in your bathroom or near a water heater.

We, at the Troy Fire Department, would also recommend that you consult with a licensed electrician prior to using any portable electric space heater to ensure your homes' electrical circuits can adequately supply the auxiliary device. And lastly, always follow the manufacturer's recommendations before using any auxiliary heating appliances.

Also, make sure you have working smoke alarms installed on every level of your home and inside each sleeping area to alert you in the event of a fire. Test the batteries on a weekly basis.
